**FASTREPORT FOR ALASKA XBASE (FRAX)
DIALOG VIEW-PRINT-PDF-EXCEL-EXIT**

15.01.2021

UVOD

FastReport for Alaska Xbase++ (FRAX) razvio je Sergey Spirin putem OEM-sporazuma s Fast Report Inc. Za više informacija o Sergey Spirinu pogledajte stranicu o njemu

<http://www.spirins.com>

FRAX je implementiran kao jedna Win32 dinamička DLL biblioteka FRSYST.DLL sa dinamičkom vezom (sve u jednom dll-u). Uz to su isporučene Xbase++ klase koje su u interakciji sa ovom bibliotekom, a nalaze se u fajlu FastRep.prg i FastRep.ch. Fajlovi FastRep.prg i FastRep.ch se isporučuje u izvornom kodu i mogu se dodati bilo kojoj Xbase++ aplikaciji. Povezivanje na Xbase++ API funkcije izvodi se u trenutku stvaranja objekta ovih klasa, tj. implementiran je model "kasnog vezivanja". Dakle, report generator ima pun pristup podacima Xbase++ aplikacija, može pozvati sve svoje funkcije. FRAX ne otvara nikakve DBF table, sve podatke prima direktno, pozivanjem Xbase++ API funkcija.

FRAX ne zahteva nikakvu instalaciju. Isporuka FRAX-a krajnjim korisnicima jednostavno uključuje FRAX dll kao deo vaše aplikacije. Za potpune informacije o ovim proizvodima preuzmite dokumentaciju u odeljku "Preuzimanja probne verzije i dokumenata".

FastReport for Alaska Xbase++ FRAX (Autor je Rus Sergey Spirin - umro 2014) niko nije preuzeo i nastavio sa razvojem. To je i danas jedan od najboljih report generatora za Xbase++ i još uvek dobro radi sa Alaska Xbase++ 1.9 355 SL1 pod Windowsom 7 i 10. Radi i sa Alaska Xbase++ 2.0 ali se ne zna šta će biti sa sledećim verzijama Windowsa i Alaska Xbase++.

Program FastReport i dalje živi na lokaciji:

<http://www.fast-report.com/>

Program **FRAX** od 2015 pa na dalje ne postoji i ne može da se kupi.

INTRODUCTION

FastReport for Alaska Xbase++ FRAX is developed by Sergey Spirin with authority of the OEM-agreement with Fast Report Inc. For more information about Sergey Spirin look page about him

<http://www.spirins.com>

FRAX is implemented as one Win32 dynamic link library (all in one dll) plus Xbase++ class of interaction with this library, which is supplied in source code and can be added to any Xbase++ application. Binding to Xbase++ API functions is performed at moment of object creating of this class, ie the model of "late binding" is implemented. Thus, the report generator has full access to the data of Xbase++ applications it can call all its procedures and functions, etc. FRAX do not open any tables, all data it recieves directly, by calling Xbase++ API functions.

FRAX does not require any installation. Redistribution FRAX to end users is simply including FRAX dll as a part to your applications. For the full information on these products, please, download the documentation at section "Downloads Trial and Docs".

FastReport for Alaska Xbase++ FRAX (Author is Russian Sergey Spirin - died 2014) no one took over and continued to develop. It is still one of the best report generators for Xbase ++ and still works well with Alaska Xbase++ 1.9 355 SL1 under Windows 7 and 10. It also works with Alaska Xbase++ 2.0 but it is not known what will happen with the next versions of Windows and Alaska Xbase++.

Program FastReport still lives on:

<http://www.fast-report.com>

The **FRAX** program from 2015 onwards does not exist and cannot be purchased.

Za sećanje na Sergeja Spirina

U folderu FastReport-FRAX isporučujem programerima Alaska Xbase++ sledeće:

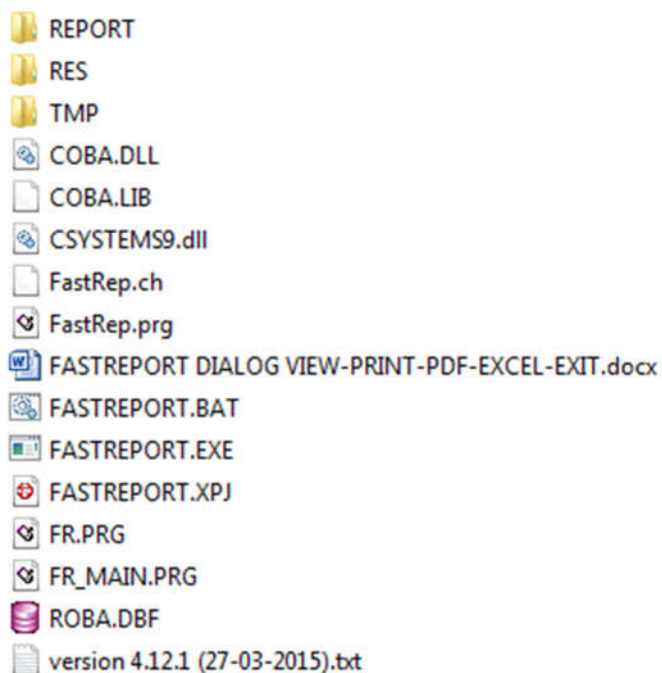

- program FastReport FRAX (free version)
- Projekat: Izvorni kod i Aplikaciju napravljenu sa Alaska Xbase++ 1.90.355 SL1 i sa eXpress++

In memory of Sergei Spirin

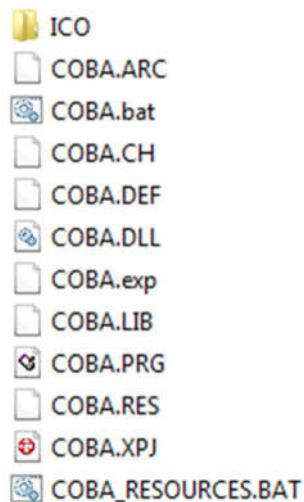

In the FastReport-FRAX folder, I deliver the following to Alaska Xbase ++ developers:

- program FastReport FRAX (free version)
- Project: Source code and Application made with Alaska Xbase ++ 1.90.355 SL1 and with eXpress ++

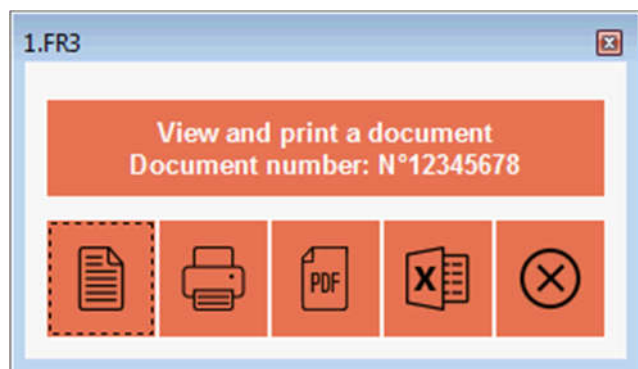

Folder: FastReport-FRAX

Folder: FastReport-FRAX\RES

Folder: FastReport-FRAX\REPORT

FRAX Report system fails to work with 2.0

From Alaska sotware website we have the following:

This update includes the ability to enable Xbase++ 2.0 applications to work properly with the FRAX reporting system released for Xbase++ 1.9. For more details about how to enable FRAX backward compatiblity see PDR 6609. In case you still have issues with FRAX and Xbase++ 2.0 please get in contact with technical support. Note that the vendor of FRAX went out of business some time ago. So irrespective of the backward compatibility option included in this update, customers using FRAX should prepare themselves for moving to an alternative reporting system in the next 12-24 months.

Sa web lokacije softvera Alaska imamo sledeće:

Ovo ažuriranje uključuje mogućnost omogućavanja pravilnog rada aplikacija Xbase++ 2.0 sa sistemom izveštavanja FRAX objavljenim za Xbase++ 1.9. Za više detalja o tome kako omogućiti povratnu kompatibilnost FRAX-a, pogledajte PDR 6609. U slučaju da i dalje imate problema s FRAX-om i Xbase++ 2.0, kontaktirajte tehničku podršku. Imajte na umu da je prodavac FRAX-a prestao raditi pre nekog vremena. Dakle, bez obzira na opciju kompatibilnosti koja je unazad uključena u ovo ažuriranje, kupci koji koriste FRAX trebaju se pripremiti za prelazak na alternativni sistem izveštavanja u sljedećih 12-24 meseca.

PDR ID: 6609 Hotfix Rollup No.: NO
Open Build: 2.00.554 Open Date: 02/10/2015

Symptom:

FRAX Report system fails to work with 2.0

Description:

The vendor of FRAX went out of business. For this reason, no adaption has occurred to ensure proper operation of the reporting tool with Xbase++ 2.0.

Consequently, Alaska Software has decided on a migration plan for existing FRAX users aiming at the following goals:

- Ensuring that current FRAX 1.9 SL1 systems work with Xbase++ 2.0
- Exploring ways of providing a migration path from FRAX Reports to whatever reporting system is supported in future Xbase++ versions.

Simptom:

FRAX Report sistem ne radi sa 2.0

Opis:

Prodavač FRAX-a je umro. Iz tog razloga, nema adaptacije i nije osiguran pravilan rad report generatora sa verzijom Xbase++ 2.0. Zbog toga se Alaska Software odlučila za plan migracije za postojeće korisnike FRAX-a čiji su ciljevi sledeći:

- Osiguravanje da trenutni FRAX 1.9 SL1 sistemi rade s Xbase++ 2.0
- Istraživanje načina pružanja puta za migraciju iz FRAX izvještaja u bilo koji sistem izveštavanja podržan u budućim verzijama Xbase++.

Solution:

Xbase++ 2.00.475 and higher has a backwards-compatibility setting to enforce C-API 1.x behavior. When using this setting it is no longer possible to use 3rd party add-ons designed for 2.0.

To enable this setting add an .arc file to your project which has the following content:

```
#define CDF_CAPI_BEHAVIOUR_ID "CAPI_Behaviour"
```

```
VERSION
```

```
    CDF_CAPI_BEHAVIOUR_ID    = "1"
```

Rebuild your Project. Your application should now behave the same as it did with 1.9 in the context of the FRAX reporting tool and your reports.

Solucija:

Xbase ++ 2.00.475 i novije verzije imaju postavku povratne kompatibilnosti na nametnuto ponašanje C-API 1.x. Kada koristite ovu postavku, više nije moguće koristiti nezavisne dodatke dizajnirane za 2.0.

Da biste omogućili ovu postavku, dodajte .arc datoteku u svoj projekt koja ima sledeći sadržaj:

```
#define CDF_CAPI_BEHAVIOUR_ID "CAPI_Behaviour"
```

```
VERSION
```

```
    CDF_CAPI_BEHAVIOUR_ID    = "1"
```

Obnovite svoj projekat. Vaša aplikacija bi se sada trebala ponašati isto kao što je to bilo sa 1.9 u kontekstu alata za izveštavanje FRAX i vaših izveštaja.
