**Maybe someone will need it**

Windows 10 64 bit. Xbase++ 2.0 1503

Xbase++ Application worked under ADS remote server. Everything worked without a problem. Then, due to other needs, some addresses on the router were changed, the LAN network was reconfigured, some parameters in ADS.INI were changed, and after that suddenly, with every command to open the DBF file, the application reported Error 5004, for example:

USE TEST.DBF NEW SHARED

Error 5004: Either ACE could not find the specified file, or you do not have sufficient rights to access the file.

```
Xbase++ Error Message                              ✕

   ⊗    Error BASE/5381
        Description :
        Operation : DbUseArea
        Thread ID : 1
        Error 5004:  Either ACE could not find the
        specified file, or you do not have sufficient
        rights to access the file.
        Called from DBF_CREATE_UPDATE(138)
        Called from DBF_ULICE_CREATE(117)
        Called from DBF_CREATE(250)
        Called from COBA_START(157)
        Called from GLAVNI_MENI(264)
        Called from MAIN(808)

        [ Abort ]    [ Retry ]    [ Ignore ]
```

The application could no longer open any DBF files.

I've looked through everything about Error 5004 on the internet, on forums, in the Help for ADS remote. I tried everything they suggested and the problem did not go away. Then it occurred to me to reinstall the ADS server. But first I restarted it. After restarting the ADS server, everything worked. The described error no longer occurred. All the time ADS.INI was the same.

```
;START ADS.INI
[SETTINGS]
; 1 - Local, 2 - Client, 3 - Try Client, fall back to Local, 4 - Internet (AIS)
ADS_SERVER_TYPE=2
; NTX or CDX
;ADS_INDEX_TYPE=CDX
ADS_INDEX_TYPE=NTX
MTIER_LOCAL_CONNECTIONS=1
[ServerAliases]
server1=Z:\
[SERVER1]
LAN_IP=192.168.0.104
LAN_PORT=6262
;END ADS.INI
```
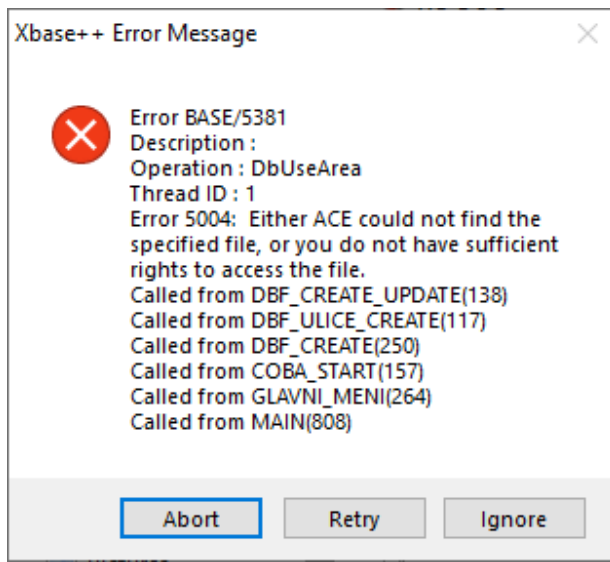

Možda će nekome zatrebati
Windows 10 64 bitni. Xbase++ 2.0 1503
Xbase++ Aplikacija je radila pod **ADS remote serverom**. Sve je radilo bez problema.
Onda su, zbog drugih potreba, menjane neke adrese na ruteru, pa je rekonfigurisana
LAN mreža, pa su menjani neki parametri u ADS.INI i posle toga odjednom je kod svake
komande za otvaranje DBF fajla, aplikacija prijavljivala Error 5004, na primer:

USE TEST.DBF NEW SHARED

**Error 5004: Either ACE could not find the specified file, or you do not have
sufficient rights to access the file.**

Aplikacija više nije mogla da otvori ni jedan DBF.
Pregledao sam sve o Error 5004 na internetu, na forumima, u Helpu za ADS remote.
Probao sam sve što su predlagali i problem nisam otklonio.
Tada mi je palo na pamet da reinstaliram ADS server. Ali prvo sam ga restartovao.
Posle restarta ADS servera sve je proradilo. Opisana greška više se nije javljala. Svo
vreme ADS.INI je bio isti.

```
;START ADS.INI
[SETTINGS]
; 1 - Local, 2 - Client, 3 - Try Client, fall back to Local, 4 - Internet (AIS)
ADS_SERVER_TYPE=2
; NTX or CDX
;ADS_INDEX_TYPE=CDX
ADS_INDEX_TYPE=NTX
MTIER_LOCAL_CONNECTIONS=1
[ServerAliases]
server1=Z:\
[SERVER1]
LAN_IP=192.168.0.104
LAN_PORT=6262
;END ADS.INI
```

Error 5004: Either ACE could not find the specified file or you do not have sufficient rights to access the file

1341 Views

I have reloaded the ADS application as instructed and the responses appear OK. The Eval Expiry date is also OK.
I have created the Database and imported the data from the Paradox original. (This content is viewable from the Advan Architect and shows OK.)
Within my model Delphi program I place the ADSTable1 component on the form. When I try to set the Database parameter I enter SchoolReg- OK. When I try to set the Tablename Parameter I enter School_roll - OK.
When I try to set the Active parameter to True (i.e. open the table for the form) I get the following

Error Message: ADSTable1: Error 5004: Either ACE could not find the specified file or you do not have sufficient rights to access the file. C:\Program Files (x86)\Embarcadero\Rad Studio\12.0\bin\SchoolReg\School-Roll.adt.

The last two elements of this string are actually in E:\Datasets\HeritageADS as expected but the function of the Active parameter above seems to reset this to the wrong path as in the error message.
I feel I must be quite close to having this right. Please can you identify where this wrong path originates?
Thanks in anticipation - Derham McAven

Bivši član

Ponovo sam učitao ADS aplikaciju prema uputama i odgovori su u redu. Datum isteka Eval-a je također OK.

Napravio sam bazu podataka i uvezao podatke iz Paradox originala. (Ovaj sadržaj je vidljiv iz Advan Architect-a i prikazuje OK.)

U okviru mog modela Delphi programa postavljam komponentu ADSTable1 na obrazac. Kada pokušam da podesim parametar baze podataka ulazim u SchoolReg-OK. Kada pokušam podesiti parametar Tablename, ulazim u School_roll - OK.

Kada pokušam da postavim parametar Active na True (tj. otvorim tabelu za obrazac) dobijam sledeće Poruka o grešci: ADSTable1: Greška 5004: Ili ACE nije mogao pronaći navedenu datoteku ili nemate dovoljno prava za pristup datoteci. C:\Program Files (x86)\Embarcadero\Rad Studio\12.0\bin\SchoolReg\School-Roll.adt.

Posljednja dva elementa ovog niza su zapravo u E:\Datasets\HeritageADS kao što se i očekivalo, ali funkcija gornjeg aktivnog parametra čini se da ovo vraća na pogrešnu putanju kao u poruci o grešci. Osećam da sam sasvim blizu da imam ovo pravo. Molim vas, možete li identificirati odakle potiče ovaj pogrešan put?

Hvala u iščekivanju - Derham McAven

Ensure that the data folder is shared if using Advantage check rights.

Advantage check rights will check the operating system to see if the user on the client computer has rights to the data files that they are attempting to access. It is recommended that the data folder be shared at this point in order to troubleshoot this error; however, please be reminded to reset the sharing of the folder to the desired configuration so as to maintain the level of security needed.

SECURITY WARNING: The following steps open the data folder wide open for access on your network and potentially beyond if the network is not properly protected. If you are not sure how this will affect the security of your data folder, do NOT proceed. Instead, create and use a dummy folder that does not contain any real data.

In order to share the folder on the server computer that contains the Advantage data (tables and Data Dictionaries), which we will called the sharedDataFolder, from the server computer browse to the sharedDataFolder, right click on the folder - select Properties - click on the Sharing tab - check the Share This Folder radio button.

It is also required that the proper users are added and that they have the correct permissions. After enabling sharing, from the sharedDataFolder Properties - Sharing tab, click on the Permissions button - click the Add button - click the Advanced button - click the Find Now button - in the scroll box select Everyone and click the OK button - click the OK button again in the "Select Users or Groups" popup - in the "Permissions for sharedDataFolder" window, select Everyone in the "Group or user names" pane, and then click the Full Control check box in the Permissions for Everyone pane - click OK - and then click OK in the "sharedDataFolder Properties" window.

Uvjerite se da je mapa podataka zajednička ako koristite prava za provjeru prednosti.

Prava provjere prednosti će provjeriti operativni sistem da vidi da li korisnik na klijentskom računaru ima prava na datoteke podataka kojima pokušava pristupiti. Preporučljivo je da se folder podataka dijeli u

ovom trenutku kako bi se riješila ova greška; međutim, imajte na umu da resetujete deljenje fascikle na željenu konfiguraciju kako biste održali potreban nivo bezbednosti.

SIGURNOSNO UPOZORENJE: Sljedeći koraci otvaraju mapu podataka širom otvorenu za pristup na vašoj mreži, a potencijalno i dalje ako mreža nije pravilno zaštićena. Ako niste sigurni kako će to uticati na sigurnost vaše mape podataka, NEMOJTE nastaviti. Umjesto toga, kreirajte i koristite lažni folder koji ne sadrži nikakve stvarne podatke.

Da biste na serverskom računaru podijelili mapu koja sadrži podatke Advantage (tabele i rječnici podataka), koju ćemo nazvati sharedDataFolder, sa serverskog računara idite na sharedDataFolder, kliknite desnim klikom na folder - odaberite Svojstva - kliknite na Kartica Deljenje - označite radio dugme Podeli ovu fasciklu.

Također je potrebno da se dodaju odgovarajući korisnici i da imaju ispravne dozvole. Nakon što omogućite dijeljenje, na kartici SharedDataFolder Properties - Sharing kliknite na dugme Dozvole - kliknite na dugme Dodaj - kliknite na dugme Napredno - kliknite na dugme Pronađi sada - u okviru za pomeranje izaberite Svi i kliknite na dugme U redu - kliknite na dugme U redu ponovo u iskačućem prozoru "Odaberi korisnike ili grupe" - u prozoru "Dozvole za sharedDataFolder" izaberite Svi u oknu "Grupa ili korisnička imena", a zatim kliknite na potvrdni okvir Potpuna kontrola u oknu Dozvole za sve - kliknite U redu - a zatim kliknite OK u prozoru "Svojstva sharedDataFolder".

Advantage Database: Error 5004 AE_FILE_NOT_FOUND

I'm not sure if this fits best under Crystal Reports, or Advantage Database.
I have a client database program written in Visual Basic 6. I am using the Developer version of Crystal reports version 9.2, and the database is an Advantage Database.
The issue is that one of the people using the program is getting an error when trying to print a particular report. If they priview the report, which I display in the CRViewer, and then print it works fine. If they try to print directly and skip the preview then the following Advantage error comes up:
Error Printing Compliance Report
-2147189176 Logon failed
Details ADO error code 0x80004005
Description: Error 5004: Either ACE could not find the specified file, or you do not have sifficient rights to access the file.
The data dictionary file is not found on the server. Ads connect.
Native error:5004
I don't understand why they would be able to preview the report if they "do not have sufficient rights to access the file" or if "The data dictionary is not found on the server".
This program is used by several hundred people and this is the only user having this issue. Everyone else can print the report, or preview and then print the report, and it works great, so I have to assume it is not the code. The user is having this issue on two separate machines in their

office.

If I grab a copy of all her database files and try to print from my own copy of the program it prints up fine.

Let me know what information I can give to help us troubleshoot this issue.

Ovaj program koristi nekoliko stotina ljudi i ovo je jedini korisnik koji ima ovaj problem. Svi ostali mogu odštampati izvještaj, ili pregledati, a zatim odštampati izvještaj, i radi odlično, tako da moram pretpostaviti da to nije kod. Korisnik ima ovaj problem na dvije odvojene mašine u svojoj kancelariji.

Da li ste pokušali da se drugi korisnik (onaj sa poznatim pravima... kao što ste vi) prijavite na mašinu(e) sa problemom? Ovo može pomoći da se utvrdi da li je to problem "korisnika/prava" ili problem "mašine".

Također, koja verzija ADS-a je raspoređena? Da li ste potvrdili da su ispravni DLL-ovi za tu verziju dostupni na toj mašini i da nijedna druga verzija tih DLL-ova nije prisutna u drugom direktorijumu unutar putanje izvršenja?

Osim za Ace32.dll, Advantage ne zahteva da drugi DLL-ovi budu registrovani koliko se sećam... u toku rada oni samo moraju biti dostupni preko Windowsovog normalnog mehanizma putanje. Dakle, moguće je da se mogu pronaći starije/novije kopije.

Vjerujem da će se problem na kraju svesti na nešto što je fizički drugačije na pogođenim mašinama, ali za svaki slučaj... Koji od API-ja za povezivanje koristite za povezivanje sa serverom? Ako se dobro sjećam, 6.x je uveo novu. Koristite li isti API za uspostavljanje veze u kodu koji radi ispravno i kodu koji ponekad ne uspije? Da li aplikacija koristi udaljeni ili lokalni server? Ako je server, da li je Windows ili Netware? Da li koristi tablice ADT stilova ili stariji DBF stil?

Čini se da je vaša aplikacija implementirana kao jednokorisnička pomoću lokalnog servera s lokalnom kopijom podataka, a ne kao aplikacija bazirana na serveru s centraliziranom kopijom podataka. U 12 godina koliko sam koristio ADS, nisam vidio da se koristi na taj način (osim nekih izolovanih testiranja/benchmarkinga) tako da nemam nikakvog iskustva na kojem bih se oslanjao ovdje.
